

Multi-Factor Digital Authentication

VERIDIUMID

AN AUTHENTICATION PLATFORM USING BIOMETRICS

VeridiumID provides a modern, secure, flexible and convenient multi-factor biometric authentication platform for Citrix customers. Veridium's independent authentication layer provides exceptional security for enterprises, eliminating the requirement for passwords and/or legacy token technology, traditionally used for strong authentication.

Veridium's mobile centric approach provides a seamless user experience while allowing the flexibility to deal with an organisations edge use cases, choosing the best authenticator for each use case, allowing mobile centric biometrics, FIDO Keys, Windows Hello, MacBook TouchID or 3rd party authenticators to be integrated into the platform.

UNIVERSAL EMPLOYEE ACCESS TO MULTIPLE ENVIRONMENTS

With VeridiumID, you can access a variety of different corporate applications and services, covering legacy, modern and SaaS applications with the same convenient user experience. Organisations have the flexibility to easily adopt new applications and workflows while maintaining access to legacy systems and applications. Gartner notes that "[Veridium has] a robust and flexible solution for Windows integration." VeridiumID business adaptors integrate seamlessly with Microsoft Active Directory, Citrix, IAM, SaaS and VPN systems using standard authentication protocols – SAML, RADIUS, oAUTH and OpenID Connect. The business adaptors help accelerate implementation, while an extensive API stack, creates a capability to integrate legacy application stacks.

ABSTRACTING AUTHENTICATION SECURITY

Security controls can be managed consistently when the authentication layer is abstracted. While providing unique capabilities to Citrix customers and supporting Windows Virtual and physical desktops, Veridium can also be integrated into IAM solutions, leveraging existing investments for Identity Management and SSO requirements. Veridium integrates with the leading IAM solutions including: Okta, PING, and ForgeRock.

Gartner

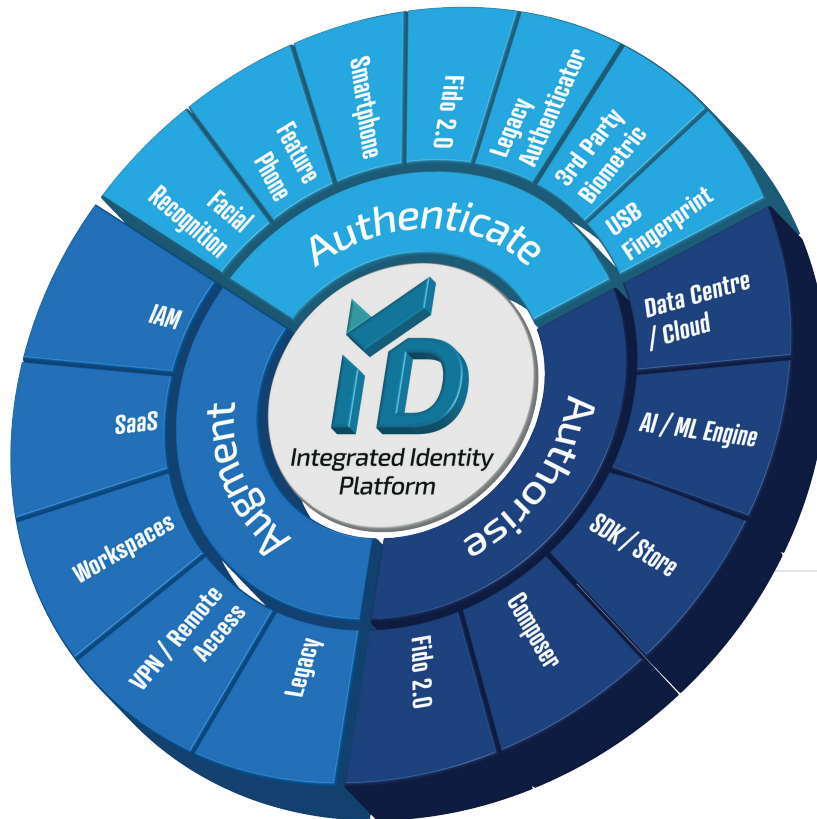

"Vendors with robust and flexible solutions for Windows integration include Veridium."

Gartner Technology Insight for Biometric Authentication, Ant Allan and Tricia Phillips, 2017, 2018

Veridium provides biometric authentication of remote users in a streamlined, secure way, complementing Citrix solutions and enhancing customer mobility."

Nabeel Youakim, Citrix Vice President of Products & Strategic Partners

UNLOCK THE POWER OF VERIDIUMID

Increase employee convenience, productivity, and enterprise security at a lower total cost of ownership for authentication to Citrix and all your applications and services. VeridiumID provides Multi Factor, location and behavioural aware authentication, utilising a mobile device + the users biometric (Fingerprint or Face). Security is further enhanced with Veridium InMotion, providing behavioural validation of the user to provide additional levels of security of user digital identity.

LOWER TOTAL COST OF OWNERSHIP

This software-only platform delivers a streamlined multi-factor solution without tokens or additional hardware. Additionally, for Citrix customers, Veridium provide unique functionality to eliminate the requirement for Citrix FAS (Federated Authentication Services) while continuing to enable SSO to Windows apps and desktops. This results in a lower total cost of ownership with reduced infrastructure requirements. Integration is quick and cost effective with easily accessible apps from AppStore / PlayStore or our SDK can be used for more custom implementations.

MULTINATIONAL SWISS BANK

Employees and contractors worldwide are using Veridium's biometric authentication platform with geo-location capabilities to meet regulations for sensitive data.

ABOUT VERIDIUM

Veridium is a leader in the development of user-centric authentication solutions which link biometrics (what you are) to smart phones (what you have) for trusted digital identities. Our authentication platform and proprietary biometrics provide strong authentication, eliminating the need for passwords, tokens, or PINs – delivering multi-factor security with single-step convenience at a lower total cost of ownership than traditional MFA solutions.
